Variable Region of Interest:

Region of Interest (ROI) or sub-windowing allows a user-specified portion of the sensor to be defined to capture images. By using a reduced portion of the image area, the frame rate at which images are recorded can be increased. The FASTCAM MINI R3-4K / R5-4K cameras allow the ROI to be set in increments of 128 pixels horizontal and 8 pixels vertical.

External Frame Synchronization:

The FASTCAM MINI R3-4K / R5-4K cameras can be fully synchronized with an external source to allow the timing of when each individual image is captured to be precisely referenced. The camera can be accurately synchronized to unstable frequencies allowing complex events such as combustion in rapidly accelerating or decelerating engines to be recorded and studied.

Record During Download Operation:

The FASTCAM MINI R3-4K / R5-4K cameras recording memory can be divided into multiple active sections. The user can record an on-going event in one memory partition while at the same time downloading a previously recorded image sequence in order to improve workflow and optimize camera operation.
